New Product Release Case Saver

Transmission: Racing Aluminum Powerglide
Alto Part # : 019300UP6 6 clips 019300

OE and aftermarket Powerglide cases have something in common. The reverse clutch steels eat into the case when the reverse clutch is used as a transmission brake. The result is either the displaced metal will end up in the filter and valve body, or the reverse steel plates will hang up in the grooves and effect your reaction time.

Alto Products Corp. is happy to introduce an alternative to replacing the sometimes very expensive case. The case savers are spring steel clips that fit into the case to give the steel plates a smooth hard surface to interact with. The case saver clips are designed to be installed into all 6 pockets to distribute the force of the trans brake evenly throughout the case. Some Powerglide cases need extra attention; this is covered in the instruction sheet.
