MAKE	MODEL	APPLICATION	YEAR
GM	POWERGLIDE	CASE BUSHING	1962-1973
DESCRIPTION & NOTES...			

Alto Products Corp. is pleased to announce our own design case bushing 019203X which provides more support to the output shaft in the Aluminum Powerglide case. This bushing is over .200" longer than the stock OE bushing. It is a direct replacement bushing and no machining of the case is required. After removing the old bushing, install the 019203X bushing into the case using a bushing driver. It may be necessary to hone the bushing to size. The added length of this bushing gives more stability to the output shaft and will not eat into the stock output shaft like the roller bearing replacement has a tendency to do.

Call your Alto Products Distributor or Representative today for further details.
